

multidimensional
FAMILY THERAPY

MDFT vs. RESIDENTIAL

RCT RESULTS

In a randomized clinical trial, MDFT delivered in the home and community **matched or surpassed residential treatment on all study measures**, including substance use, delinquency, and mental health symptoms.

This counters the **conventional wisdom** that youth with complex problems can only be adequately treated in a residential setting.

MDFT is an effective alternative to residential treatment that can be delivered at **lower cost** and **without removing the youth from the home**.

15% of American youth in treatment for substance use are in residential.

MDFT can be delivered at

64% LOWER COST than residential.²

MDFT keeps kids in the home and in school during treatment.
